

Choose from pre-defined sieve nests - Save data

Direct creation of .PDF files - Adobe Acrobat no longer needed

Test data and results may be exported to XML files

Container weight database

New chart types - You can now choose from semi-log, $x^{.45}$, Wentworth (Phi scale), log(size) vs. probability and linear

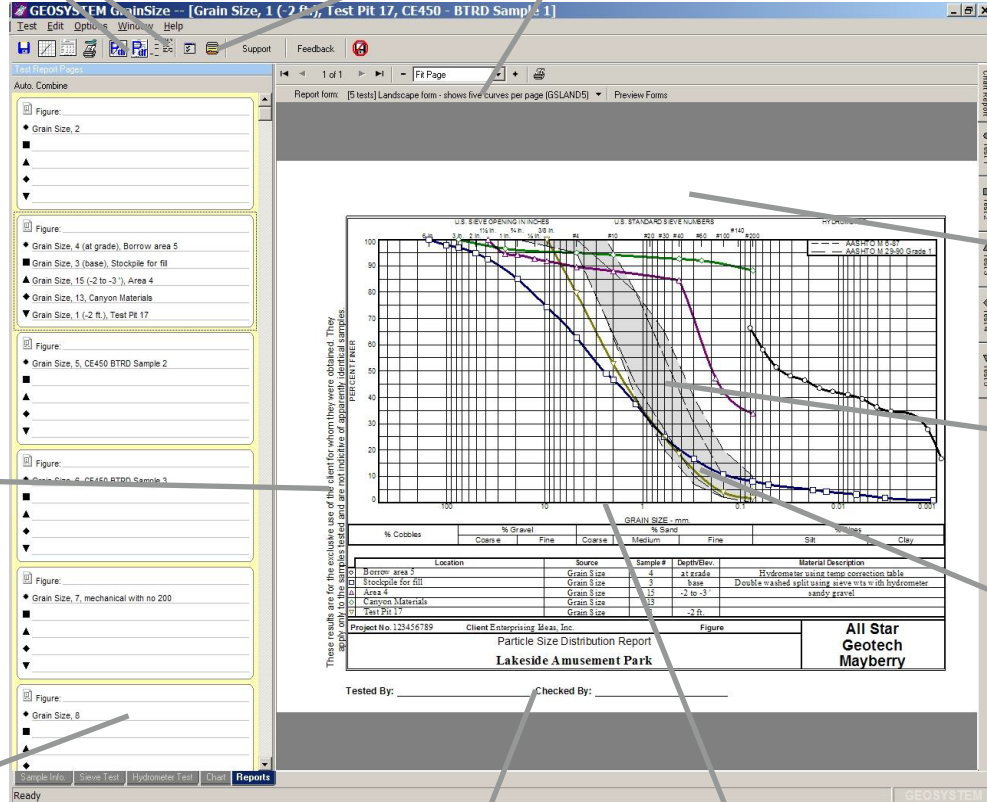

Distribution curve on data entry screen - See your data as it is entered

Reports can include corporate policy note - Such as disclaimers, privacy notices, etc.

Multiple sample splits - No longer limited to 1 split

Easier grouping of tests for reports

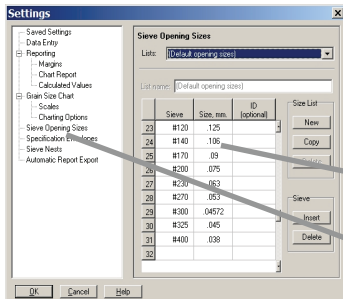

Selectable margins for reports

Shaded, multiple specification envelopes

Curves can be plotted in color

Reports can include an area for signing

Selectable particle size scales and chart title

User-specified sieve sizes - Use your measured sieve opening sizes rather than nominal sizes.

Easier program setup

New particle diameter calculations - Now with D20, D80, D90 and D95

Support for U.S.D.A., Burmister and Wentworth classifications - GrainSize allows you to specify which classification to use on a project-by-project basis

Include specification tolerances - e.g., #200: 10%-15%, ±2%

Fully automatic export of test reports - Whenever you enter a test or modify its data, GrainSize can automatically generate a .PDF version of the test report in a directory of your choosing

GrainSize Version 4

Sieve and Hydrometer Test Software

Our grain size distribution software has a new version number and a ton of new features. This new release continues our line of grain size programs begun with a small DOS program back in 1984.

The new program incorporates years of user suggestions, including dual splits, direct .PDF report creation, configurable sieve sizes and color curves. The software also expands our support for filter media and activated carbon testing with probability-logarithmic graphs, for sediment testing with Wentworth (Phi) charts and for rip rap testing with expanded chart scales to handle large sizes.

You can download a demo of the new program from
<http://www.geosystemsoftware.com/g4demo>

If you're ready to order, complete and fax the form below.

GrainSize Order Form

Company Information

Contact Person: _____
Company: _____
Address: _____
City, state, zip: _____
Phone: _____ Fax: _____
E-mail: _____

Shipping Instructions

- Priority Mail (no charge)
- Overnight (contact us for shipping charges)
- Charge to FedEx account number: _____
- Charge to Airborne account number: _____
- Please e-mail a link to a downloadable copy of the program.
(We'll still ship you a CD and manual.)

GEOSYSTEM GrainSize Version 4 Pricing

Upgrade from Version 1.x **\$250**

You qualify for this price if you have licensed version 1.x of the GEOSYSTEM Windows Grain Size Distribution program. You can check to see if you have this program by: starting your GEOSYSTEM program, then opening a grain size test, and selecting "Help" > "About this program". If the "About this program..." dialog says "GEOSYSTEM Grn-Size Module 1.1" (or 1.0) you qualify for the version 1.x upgrade price.

Upgrade from DOS "GRN-SIZE" program **\$400**

This price is available to GEOSYSTEM customers who have licensed our DOS GRN-SIZE program and have not yet upgraded to a GEOSYSTEM Windows Grain Size Distribution program.

New License **\$600**

If you have not licensed an older version of this program, and no other office of your company has licensed a copy of the program, the standard new license fee applies. You will still qualify for a small discount if you have already licensed any other GEOSYSTEM program, or if you will be licensing multiple programs. Use our price quote request form to figure your discount.

New Branch Office License **\$480**

Branch office pricing is extended to any company office licensing GrainSize if any other office of the same company has already licensed any GEOSYSTEM Grain Size Distribution program.
